# HOW TO TRUNCATE TEXT USING CSS?

# CSS Text Truncate

- => This property specifies how overflowed content that is not displayed should be signaled to the user.
- => It can be clipped, display an ellipsis (...), or display a custom string.

# CSS Text Truncate

- => Following properties are required for text-overflow:
- white-space: nowrap;
- overflow: hidden;

### CSS Text Truncate

- 1 Truncating single line:
- ⇒ Set the width of the text element and add the mandatory properties.
- 2 Truncating multiple lines:
- ⇒ We use "-webkit-line-clamp" to truncate multiple lines.

#### CSS text-overflow

OUTPUT

#### Truncating single line

```
<div class="container">
    Get me some coffee if you
    want me to code more 
</div>
.p{
```

#### **Before**

Get me some coffee if you want me to code more

#### **After**

Get me some coffee...

#### Truncating multiple lines

white-space: nowrap;

text-overflow: ellipsis;

overflow: hidden;

width: 160px;

```
.p{
    width: 160px;
    overflow: hidden;
    -webkit-box-orient: vertical;
    display: -webkit-box;
    text-overflow: ellipsis;
    -webkit-line-clamp: 2;
}
```

#### <u>After</u>

Get me some coffee if you want me to cod...

}
